

**iasWorld** is a Web-based suite of tools which fully address the enterprise needs of the modern assessment and tax agency, from managing property information updates and public access to supporting tax assessment policy decisions.

**iasWorld delivers Enterprise Class Solutions:** *iasWorld* provides solutions for the whole enterprise built on modern internet, spatial, workflow, and collaborative technologies. *iasWorld* lets you deliver solutions which improve the quality of service while reducing operating costs.

**iasWorld provides Business Process Automation:** Intuitive tools for data maintenance are only part of a complete solution. *iasWorld* automates the primary business processes of assessment and tax offices, including customer service, modeling, field operations, appeals, tax billing and collections.

**iasWorld embraces an eCommunity View:** *iasWorld* goes beyond the front door of your organization, connecting you to external entities such as other local government agencies, the commercial sector and the public. *iasWorld* uses web-services technologies to send and receive information directly from other organizations, greatly reducing the costs and delays associated with inter-agency data transfer.

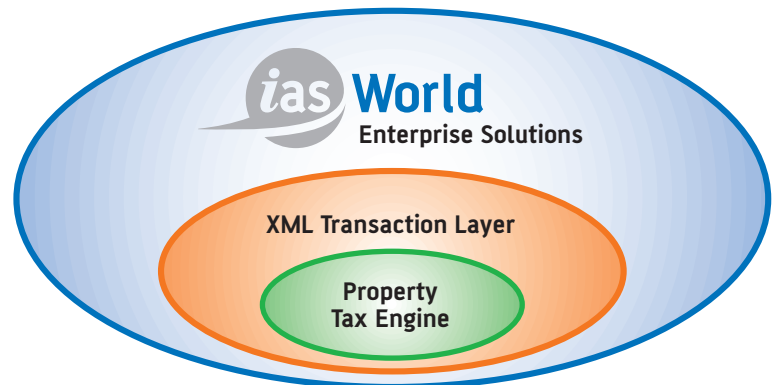

**iasWorld provides protection from Technology Obsolescence:** Based on widely accepted and standardized open Internet technologies, *iasWorld* delivers productive solutions that not only work for your agency now but will allow even richer integration in the future.

## ! **iasWorld**

**Property Tax Engine** is a comprehensive and proven set of business services for managing the property tax life cycle and appraiser business processes. This collection includes tools for performing computer aided mass appraisal, personal property valuation, assessment administration, tax billing, maintaining delinquent tax records, and integrated financials.

**imaintain** is a transaction oriented interface for the proven and trusted Property Tax Engine. **imaintain** provides a set of web transaction templates which are designed to streamline common work processing by consolidating information from many different sources, such as relational records, GIS, photos, sketches etc.

**ienable** is the underlying framework for all **iasWorld** productivity tools. **ienable** provides a web services framework based on web standards (such as XML, UDDI and SOAP) to enable the rich functionality of **iasWorld**. **ienable** functionality includes property records search and viewing, the customization of content, workflow and transactions. With the appropriate security and training, **iasWorld** users can update content, redesign forms, enable specific work tasks and optimize processes.

**idoc** enables Electronic Document Management System (EDMS) integration with **iasWorld**. **idoc** provides tools to scan and store any type of document to a central database or web server. **idoc** also enables document management, including the ability to link related documents to property accounts, and supports open connectivity to industry leading EDMS repositories, including Microsoft Sharepoint.

**irespond** provides a messaging framework to manage customer correspondence and workflow task assignments. Configuration flexibility allows **irespond** to manage general email and web form correspondence as well as support specific business processes with event driven notification and task queuing.

**ianalyze** is a comprehensive spatially enabled module providing all of the tools needed for conducting assessment analysis scenarios. **ianalyze** provides easy access to statistics commonly used in assessment analysis and modeling (Median, COV, COD, PRD, and more). Users can freely move between tabular, spatial (such as thematic maps) and charting representations of any dataset.

**ifield** takes **iasWorld** into the field. Using mobile devices based on the Microsoft Windows CE .NET architecture, this productivity tool provides online and offline access to field visit requests, as well as work assignment and field activity audit management. With **ifield**, assessors always have up-to-date information.

**icare** provides the public and other organizations with a sophisticated and attractive web portal for viewing and searching assessment information. **icare** can be used by the public over the Internet or at public service kiosks.

**ipay** adds secure e-commerce to your public access site. Plug in **ipay** and begin accepting and processing online payments by credit card or electronic check. Use the **ipay** back office merchant center tools to report on and monitor transactions.
